

We're different

If you follow blockchain, you've seen countless ICO's, wallets, and tokens. We think of this as vertical innovation, and it's great. But we think improvement across blockchains – horizontal innovation – is what's needed to fully unlock the potential of blockchain. And that's our mission: to make blockchain more **personal**, more **connected** and **mainstream**.

Blockchain, connected

Our innovative Hyperlayer is a layer 2 solution that seamlessly connects blockchains. Use it to build powerful solutions that span multiple blockchains, without requiring protocol changes. You can create smart contracts, trade and issue custom tokens that use multiple blockchains, like one for fast transactions and another for low costs.

Blockchain, personal

Hash addresses are everywhere in crypto. And they're confusing. Hard to read, impossible to remember and easy to lose. Using our Hyperlayer, we're building a friendly name system for all blockchains, called the CNS.

Just as the DNS did for the internet, our CNS makes the blockchain easier, safer, and more accessible.

The right team

Delivering powerful features with simplicity is hard. We know what it takes because we've done it before. We've designed and delivered products which are used by hundreds of millions of people all over the world, like Bitcoin, Excel, Word, Google and the Internet itself.

A strategic go-to-market

Great platforms need more than technology to reach the mainstream. Our Coinweb 360Accelerator enables businesses and their customers to benefit from the blockchain and Coinweb technology, while also growing our community.

Blockchain is the future. Those investing in it, including Andreessen Horowitz, DFJ, Google, Microsoft, Deloitte, Oracle, VISA, Goldman Sachs, HP, IBM and Facebook, see its huge potential. Our shared mission is to unlock its true potential.
